

Arizonans Want Safe Medication Prescribing

Psychiatrists are uniquely trained to prescribe mental health medications and advise other medical professionals on safe and appropriate prescribing when treating mental health conditions.

When it comes to treating mental health conditions, **79% of people believe only individuals who have a medical degree and a state license to practice medicine should be allowed to prescribe powerful psychiatric medications.**

Arizonans want licensed medical doctors like psychiatrists involved in leading patient care. This includes making diagnoses, creating treatment plans, and prescribing powerful psychiatric medications that can affect the entire body.

- In a recent poll, 66% of Arizonans supported making it easier for care to be coordinated between physicians, nurses, physician assistants, therapists, and others so more people have access to care that is overseen by a physician.

Arizona legislators should enact policies that prioritize care coordination and ensure that when a patient's mental health condition requires medication, a trained physician like a psychiatrist is involved in patient care.

People in Arizona want solutions that increase access to timely mental health care and focus on coordination between mental health providers.

Methodology

The online omnibus survey was conducted by ENGINE INSIGHTS among a sample of 501 residents of Arizona. All respondents are 18 years of age and older. This survey was live on December 14-21, 2021. Respondents for this survey were selected from among those who have volunteered to participate in online surveys and polls. The data have been weighted to reflect the demographic composition of the 18+ population. All sample surveys and polls may be subject to multiple sources of error, including, but not limited to sampling error, coverage error, error associated with nonresponse, error associated with question wording and response options, and post-survey adjustments.

Coloradans Want Safe Medication Prescribing

Psychiatrists are uniquely trained to prescribe mental health medications and advise other medical professionals on safe and appropriate prescribing when treating mental health conditions.

When it comes to treating mental health conditions, **83% of people believe only individuals who have a medical degree and a state license to practice medicine should be allowed to prescribe powerful psychiatric medications.**

Just 7% of people say someone without a medical degree should be able to prescribe powerful psychiatric medications.

72% of people in Colorado say they want a licensed medical doctor like a psychiatrist leading patient care. This includes making diagnoses, creating treatment plans, and prescribing powerful psychiatric medications that can affect the entire body.

Colorado legislators should enact policies that prioritize care coordination and ensure that when a patient's mental health condition requires medication, a trained physician like a psychiatrist is involved in patient care.

People in Colorado want solutions that increase access to timely mental health care and focus on coordination between mental health providers.

- 60% support making it easier for care to be coordinated between physicians, nurses, physician assistants, therapists, and others so more people have access to care that is overseen by a physician.
- 46% support making it easier to see a healthcare professional via telemedicine.
- 41% support funding healthcare professionals to practice in rural and inner-city communities.
- Only 5% support giving non-doctors the same authority to prescribe medications as medical doctors.

Methodology

The online omnibus survey was conducted by ENGINE INSIGHTS among a sample of 502 residents of Colorado. All respondents are 18 years of age and older. This survey was live on January 4-12, 2022. Respondents for this survey were selected from among those who have volunteered to participate in online surveys and polls. The data have been weighted to reflect the demographic composition of the 18+ population. All sample surveys and polls may be subject to multiple sources of error, including, but not limited to sampling error, coverage error, error associated with nonresponse, error associated with question wording and response options, and post-survey adjustments.

Floridians Want Safe Medication Prescribing

Psychiatrists are uniquely trained to prescribe mental health medications and advise other medical professionals on safe and appropriate prescribing when treating mental health conditions.

When it comes to treating mental health conditions, **79% of people believe only individuals who have a medical degree and a state license to practice medicine should be allowed to prescribe powerful psychiatric medications.**
